

~~wherein the connector is adapted to be removably connected to at least one other connector by an ultrasonic weld.~~

15. (Amended) A connector device adapted to be used with an electrical cabling, said device comprising:

a first connector having a housing and opposing sides; and

a second connector having a housing and opposing sides;

wherein at least one of said opposing sides of said first connector is removably connected to one of said sides of said second connector.

Please insert new claim 29 as follows:

29. (New) A connector comprising:

a housing defining an interior channel and having two opposing sides; and

a crimping device movably positioned inside said housing and adapted to secure at least one electrical cable in said channel;

wherein the connector is adapted to be connected to at least one other connector.

REMARKS

The title has been amended to more correctly reflect the invention.

Claims 1-28 were originally presented in the application. By this amendment, claims 1 and 15 are amended and new claim 29 has been added. It is respectfully submitted that the pending claims define allowable subject matter.
